

AMENDMENTS TO THE CLAIMS

Claim 1 (Currently Amended): A liquid crystal display comprising:

- 5 a plurality of signal lines;
a plurality of scanning lines electrically connected
to a scanning line control circuit; and
a plurality of pixels, each pixel comprising:
10 a liquid crystal cell having a pixel electrode
and a storage capacitor, and
a switching transistor comprising a gate
electrode connected to a scanning line, a
drain electrode connected to one of the
15 signal lines, and a source electrode
connected to the pixel electrode, the gate
electrode and the source electrode having
an overlapping region[[]], the size of the
overlapping region of a pixel closer to the
20 scanning line control circuit being smaller
than the size of the overlapping region of
another pixel farther from the scanning line
control circuit.

- ~~wherein an area of the overlapping region of a pixel
closer to the scanning line control circuit is
25 smaller than an area of the overlapping region
of another pixel farther from the scanning line
control circuit.~~

- Claim 2 (Previously Presented): The liquid crystal
30 display of claim 1 wherein the gate electrode of
each pixel comprises a first block located within
the overlapping region, and an area of the first

block of a pixel closer to the scanning line control circuit is smaller than an area of the first block of another pixel farther from the scanning line control circuit.

5

Claim 3 (Previously Presented): The liquid crystal display of claim 1 wherein the source electrode comprises a second block of each pixel located within the overlapping region, and an area of the
10 second block of a pixel closer to the scanning line control circuit is smaller than an area of the second block of another pixel farther from the scanning line control circuit.

15 Claim 4 (Original): The liquid crystal display of claim 2 wherein the gate electrode further comprises a pair of protective structures located on both sides of the first block for preventing the first block from being separated from the gate electrode.

20

Claim 5 (Currently Amended): A liquid crystal display comprising:

a scanning line connected to a scanning line control circuit;

25 a first region comprising at least a first transistor having a first gate electrode connected to the scanning line, a first drain electrode connected to a first signal line, and a first source electrode connected to a first
30 pixel electrode, the first gate electrode and the first source electrode having a first overlapping region; [[and]]

5 a second region located between the scanning line control circuit and the first region comprising at least a second transistor having a second gate electrode connected to the scanning line, a second drain electrode connected to a second signal line, and a second source electrode connected to a second pixel electrode, the second gate electrode and the second source electrode having a second overlapping region,
10 ~~an area~~ the size of the first overlapping region being greater than ~~an area~~ the size of the second overlapping region; and
15 a third region located between the scanning line control circuit and the second region comprising at least a third transistor having a third gate electrode connected to the scanning line, a third drain electrode connected to a third signal line, and a third source electrode connected to a third pixel electrode, the third gate electrode and the third source electrode having a third overlapping region, the size of the second overlapping region being greater than the size of the third overlapping region.

25 Claim 6 (Previously Presented): The liquid crystal display of claim 5 wherein the first gate electrode comprises a first block located within the first overlapping region, and the second gate electrode comprises a second block located within the second overlapping region, and an area of the first block
30 is greater than that of the second block.

Claim 7 (Original): The liquid crystal display of claim
6 wherein the first gate electrode further
comprises a pair of protective structures located
on both sides of the first block for preventing the
5 first block from being separated from the first gate
electrode.

Claim 8 (Previously Presented): The liquid crystal
display of claim 5 wherein the first source
10 electrode comprises a third block located within
the first overlapping region, and the second source
electrode comprises a fourth block located within
the second overlapping region, and an area of the
third block is greater than an area of the fourth
15 block.
